

## HPD-70801-yy-xx

# 10Gbps DWDM 100GHz grid 40km SFP+ Transceiver

## Product Description

The 70801-yy-xx is a 10Gbps enhanced small form factor pluggable SFP+ DWDM transceiver compatible with relevant standards. The 16dB Power Budget allows long reach in single-mode duplex fiber at rated transmission speed.

## Features

- Up to 11.3 Gbps datalinks
- Up to 40km reach
- EML laser
- Hot-pluggable
- Single 3.3V power supply
- Digital Diagnostic Monitor (DDM)
- Power Consumption < 2W

## Applications

- 10GBASE-ER/EW DWDM
- 10G FC
- SDH/SONET OC192/ STM64

## Maximum Ratings

Parameter	Symbol	Min.	Max.	Unit
Supply Voltage	V <sub>CC</sub>	-0.5	4	V
Storage Temperature	T <sub>s</sub>	-40	85	°C

For safety and reliability reasons, please read the following information carefully.

Light Budget is one of the key items for designing fiber optic network. In order to create a product that will meet application requirements. To adequately characterize the budget loss, the following key parameters are generally considered:

- Transmitter: Output power, temperature and aging
- Fiber connections: Active connection and splices
- Fiber Cable: fiber attenuation and temperature effect
- Receiver: Detector sensitivity
- Others: Safety margin and repairs

When one of the above-listed variables fails to meet specifications, the performance of the network can be greatly affected or worse, the degradation can lead to network failure. Unfortunately, not all the variables can be controlled with ease during the deployment of the network or the maintenance stage; however, there exists one component—the connector—that is too-often overlooked, sometimes overused (test jumpers) but that can be controlled using the proper procedure.

This is a Class 1 Laser Product according to IEC 60825-1:2014 compatible with 21 CFR 1040.10 and 1040.11 except for deviations pursuant to Laser Notice No. 50, dated (June 24, 2007).

This transceiver is specified as ESD threshold 1kV for SFI pins and 2kV for all others electrical input pins, tested per MIL-STD-883G, Method 3015.4 / JESD22-A114-A (HBM). However, normal ESD precautions are still required during the handling of this module.

Dirt / debris

The optical ports of the module need to be terminated with an optical connector or with a dust plug in order to avoid contamination. In a study by NTT-Advanced Technology, 98% of installers and 80% of network owners reported that issues with connector contamination were the greatest cause of network failures.

## EU declaration of conformity

The CE marking is mandatory for this category of products. It is the manufacturer's declaration that the product meets the requirements of the applicable EU directives required to allow free movement and sale of the product throughout the European Economic Area.
